The performance of Blue Chip Option Alert published recommendations is based on the following rules:

1. Entry and exit prices are based on the market price of each security one hour following transmission of our recommendations.
2. Where limit prices are recommended, the trade is not considered executed until the limit price is reached.
3. Performance of recommendations does not include assumptions about broker commissions paid.

We use the rules above to establish an objective reference point from which to measure how well our recommendations have performed – they are not a guide to the future.

The actual gains and losses a subscriber experiences will vary to the extent that he or she cherry picks among our recommendations, allocates funds differently, or times purchases and sales differently, thus realizing different entry and exit prices. And, while we don't make assumptions about transaction costs, in the real world they do affect profitability.
